The Data

# The Data

## Student Engagement

Datasets used as part of the OC2 lab's work on student engagement in eLearning environments

Student ID	# Logins	# Content Reads	# Forum Reads	# Forum Posts	# Quiz Reviews before submission	Assignment 1 lateness indicator	Assignment 2 lateness indicator	Assignment 3 lateness indicator	Assignment 1 duration to submit (in hours)	Assignment 2 duration to submit (in hours)	Assignment 3 duration to submit (in hours)	Average time to submit assignment (in hours)
student000000	143	344	58	0	3	0	0	0	178.166667	92.716667	116.166667	129.016667
student000001	70	342	0	0	4	0	0	0	294.033333	196.083333	217.750000	235.955556
student000002	42	219	0	0	3	0	0	0	169.600000	235.733333	260.333333	221.888889

# The Data

## Student Performance

Datasets used as part of the OC2 lab's work on student performance in eLearning environments

Student ID	Quiz01 [10]	Assignment01 [8]	Midterm Exam [20]	Assignment02 [12]	Assignment03 [25]	Final Exam [35]	Course Grade	Total [100]
student000000	95	91	70	90	84	64	85	85
student000001	85	76	65	61	73	64	76	76
student000002	85	41	73	61	73	61	73	73

Student engagement prediction

# K-Means

## Definition

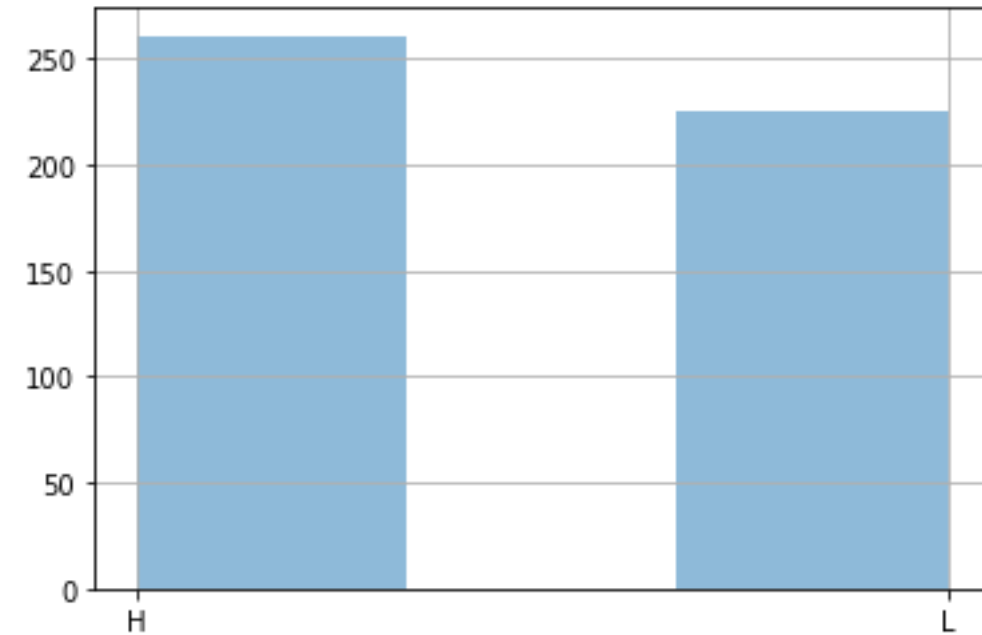

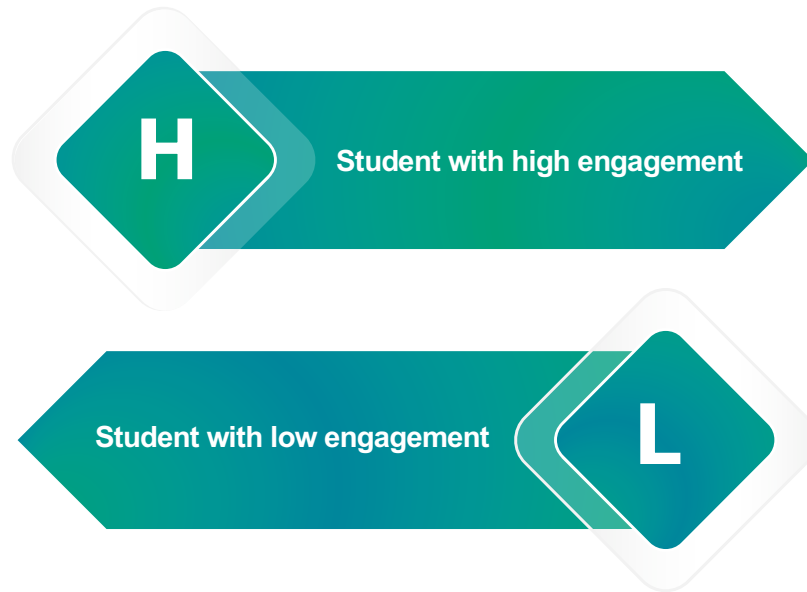

Unsupervised algorithms make inferences from datasets using only input vectors without referring to known, or labelled, outcomes

## Idea

To predict engagement level of student by classify students ether having high or low engagement

# Predict student engagement

Student performance prediction

# K-Means

## Definition

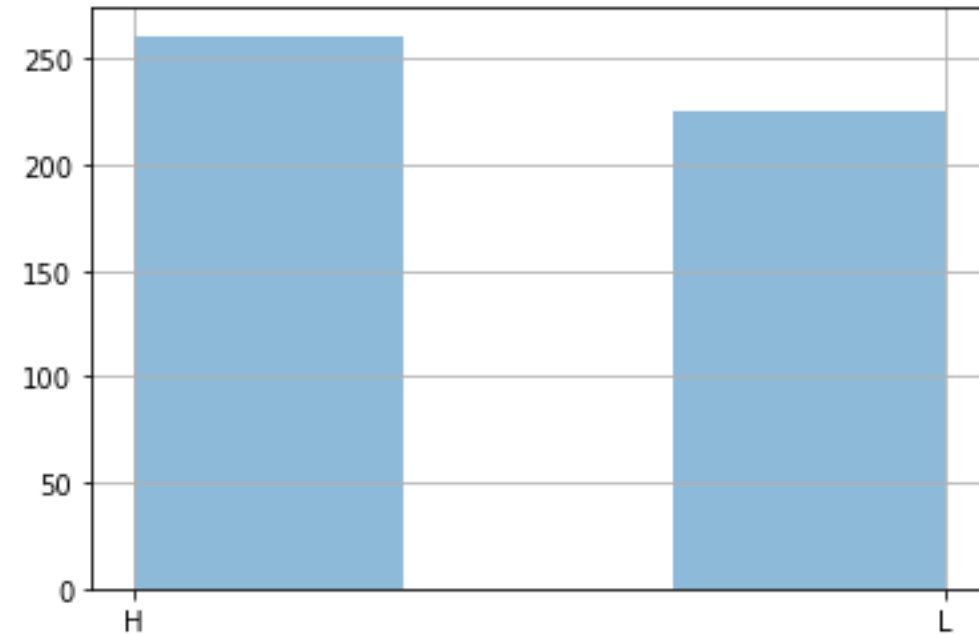

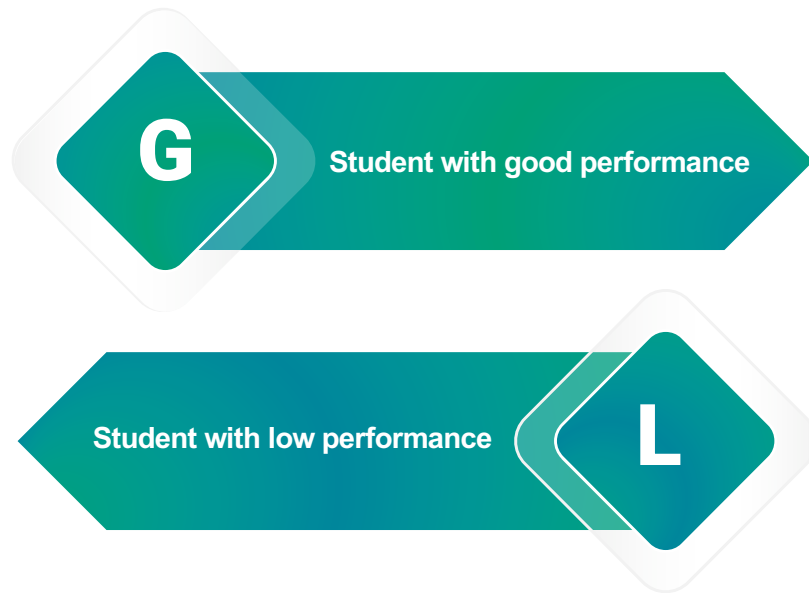

Unsupervised algorithms make inferences from datasets using only input vectors without referring to known, or labelled, outcomes

## Idea

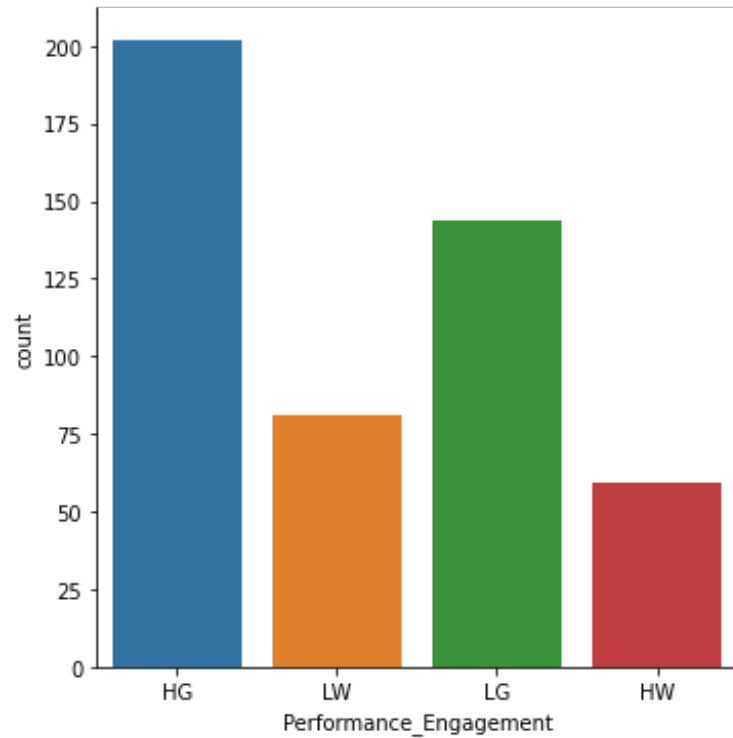

To predict performance level of student by classify students that have good or week performance

# Predict student engagement

Students require attention

# Students Engagement & Performance

```
Engagement Level Performance
H                G      202
                 W       59
L                G     144
                 W      81
dtype: int64
```

# K-NN

## Definition

Supervised algorithms solve both classification and regression problems that relies on labeled input data to learn a function that produces an appropriate output

## Idea

To predict performance and engagement of student by classify students that have good or week performance with high or low engagement

# K-NN

	precision	recall	f1-score	support
HG	0.95	1.00	0.98	41
HW	1.00	0.83	0.91	12
LG	0.97	0.97	0.97	29
LW	0.94	0.94	0.94	16
accuracy			0.96	98
macro avg	0.96	0.93	0.95	98
weighted avg	0.96	0.96	0.96	98

```
#show first 5 model predictions on the test data  
classifier.predict(X_test)[0:5]
```

```
array(['LW', 'LW', 'HW', 'HG', 'HG'], dtype=object)
```

Demo
